

/ Automatic Optical Quality Control

How to ensure 100 % quality in production

Achieving consistently high quality in the filling- and packaging line demands innovative solutions that integrate seamlessly into existing workflows.

Ensuring that every single product meets strict quality standards is challenging. Traditional approaches involve piecing together components from multiple providers – leading to interface challenges, inefficiencies, and frustrating integration issues: limited space, time-consuming product changeovers, and the complexity of diverse production parameters. There is way more to consider than just mounting a camera.

Key Features

- Cap inspection
- Seal ring inspection
- Label check
- Mix-up control
- Checkweighing

Benefits

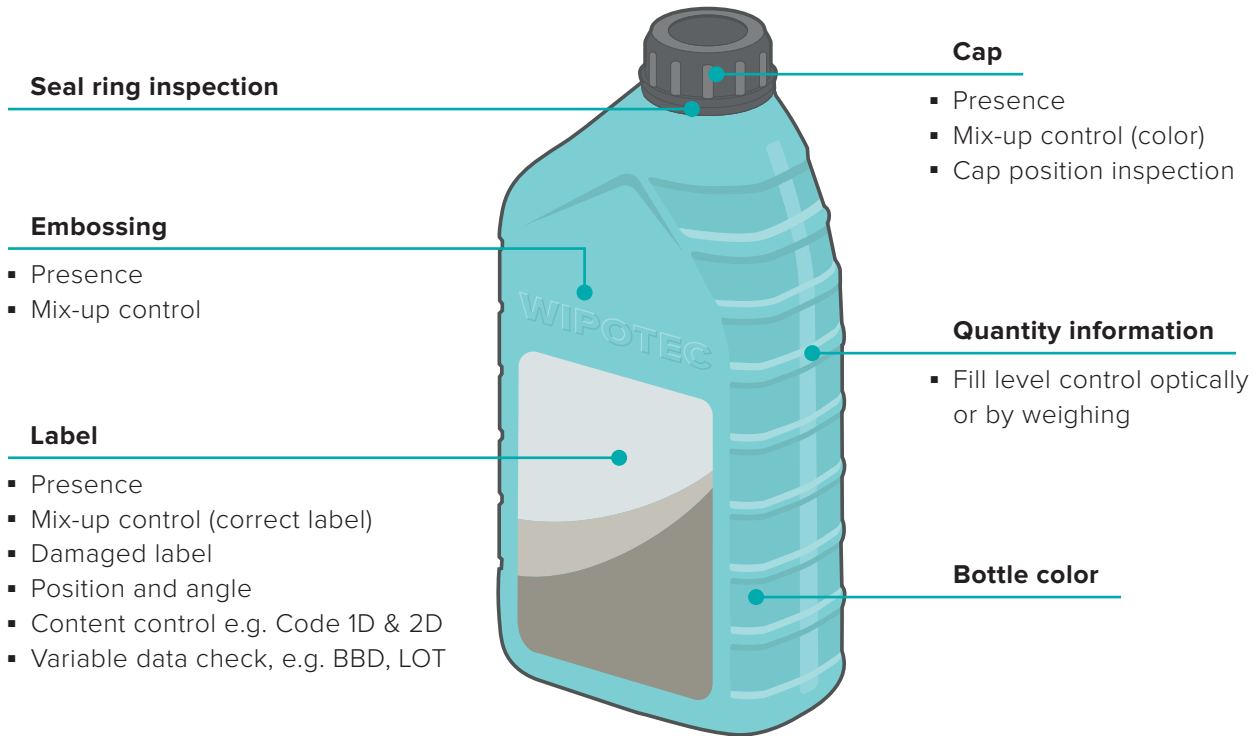

- One system
- One user interface
- One contact
- One service partner
- Unlimited options

/ All-around inspection with TQS

TQS offers a way forward towards automation and digitalization. This system combines multiple inspection tasks like cap position, seal ring, label verification and weight control in one single, compact unit.

Implementing this streamlined process reduces training time, optimizes changeovers, and ensures quality control that boosts production performance instead of slowing it down. ▲
