# RELIABLE WEIGHING OF CYLINDRICAL PRODUCTS

**HC-A IS**

The **HC-A-IS** is a special machine version of the HC-A for weighing wobbly, cylindrical products (e.g. aerosol cans, etc.) with high throughput and accuracy. The checkweigher is placed at any point on the existing production line. The product handling rotary star wheel of the weighing system projects over the existing transport lane so integrating it does not require any disconnection of the production line.

A wide and coordinated range of sorting devices is available for the rejection of products with incorrect weight. The use of a high-tech weigh cell from Wipotec, which works on the principle of electro-magnetic force restoration (EMFR), guarantees the best technology for excellent weighing results.

The easily replaceable, positively-driven, two-part star wheel removes products from the main product flow. The products are sorted, separated, and weighed individually and then returned to the production line. Under- or overweight products are automatically sorted out.

The intuitive user interface ensures convenient operation via clearly structured, 15-inch colour TFT display with touchscreen.
